DOST-FNRI eLibrary

QA Reference

Pages and Functions

Every page and action of the eLibrary, with its address, who may use it and what to check. Addresses are relative to the site being tested (for example the staging server); `{id}` stands for a record or item number.

Document	QA Reference: Pages and Functions
System	DOST-FNRI eLibrary (OPAC and administration)
Audience	QA testers
Date	22 October 2026
Version	1.0
Source	`docs/implemented/QA_REFERENCE.md`

Contents

1 Roles and test accounts 3

2 OPAC: public pages 3

3 OPAC: patron account 5

4 Admin: cataloguing 6

5 Admin: circulation and inventory 8

6 Admin: people and roles 9

7 Admin: dashboard, news, inquiries, reports, settings 11

8 Must not work: security checks 14

> **How to use this reference.** Each section lists the pages and actions of one part of the eLibrary: where to find it, which account may use it, and what to check.
>
> Section 8 lists what must be refused; repeat it every test round. Addresses are relative to the site under test, and `{id}` stands for a record or item number.

1 Roles and test accounts

Test every page with the account its **Who** column names, and once with an account that should be refused. There are three kinds of account; a staff account also has a role, and the role decides which admin menus and buttons appear.

Account	How to get one	What it can do
Guest	Not signed in	Browse the OPAC: home, search, record pages, citations. Read, Download, Save and Inquire ask them to sign in.
Patron	Register at `/register`, or staff create one at `/admin/register`	Read, download, save, inquire, reserve and review; their own profile, inquiries and reservations
Staff	A super admin creates it at `/superadmin/admin-create`	The admin panel, limited by role. In the OPAC: search, read, download, share and save only; no inquiries, reservations or reviews, and their views and downloads are not counted

Role (staff)	Permissions (default)	Use it to test
`super_admin`	All 36	Everything, including administrators, roles and permissions
`developer`	All 36, and passes every check	Same as super admin
`system_admin`	32: all except AI mode, material types, blocking/banning patrons, editing imports	Most admin pages
`cataloging_admin`	Records (create, edit, delete), batch import, record list, MARC template create	Cataloguing
`circulation_admin`	Reservations (view, manage), check-out/in, block/ban patrons	Circulation
`faculty`	Records (create, edit, delete), no record list	Record editing without lists
`serial_admin`	Dashboard only	That everything else is refused

In the tables below, **Who** gives the account type and the permission a page needs (for example `edit.catalog`). A staff account without that permission gets "403 Forbidden" and does not see the menu item or button. Roles and permissions can be changed at `/admin/roles`; the lists above are the defaults.

2 OPAC: public pages

These pages are open to everyone. Only published records ever appear; a held, deleted or unknown record answers "404 Not Found".

Page	Address	Who	What to check
Landing	`/`	Anyone	Goes straight to `/home`
Home	`/home`	Anyone	Search box; Browse the Shelves (records by material type, with covers); Recent Uploads; Highlights; Most Downloaded; Related News. A signed-in patron who has not done the satisfaction survey sees its popup

Page	Address	Who	What to check
Search results	`/results?query=…`	Anyone	Keyword search; filters (material type, author, year, full text available) with counts; sort; grid and list views; paging; suggestions while typing
Quick view (on results)	button on each result	Anyone	Opens the record's main details over the list without leaving it
Cite (on results)	button on each result	Anyone	Shows APA, MLA and Chicago; each Copy button copies its citation
AI mode (on results)	switch on the search page	Anyone, when enabled in Settings	Answers a question from the collection with numbered sources; at most 10 questions a minute; when the AI service is off it says "AI mode is temporarily unavailable"
Record page	`/full-description/{id}`	Anyone	Redirects to `/full-description/{id}-{title}`. Title, authors, ratings, view and download counts, Full Record table, Citation, Physical Copies, Reviews
Citation box	on the record page	Anyone	APA, MLA, Chicago switch: one shows at a time; Copy copies the one showing; the last style chosen is remembered after a reload
Read	button on the record page	Patron, staff	Opens the PDF reader over the page and shows all pages. Guest gets a sign-in popup. Greyed out when the record has no PDF
Download	button on the record page	Patron, staff	Saves the PDF. Guest gets a sign-in popup. A patron's download is counted, staff downloads are not
Share	button on the record page	Anyone	Copies the record's link
Save	star on the record page and results	Patron, staff	Adds or removes the record from Saved; guest gets a sign-in popup
Inquire	button on the record page	Patron	Opens the inquiry form; the message appears under Inquiries. Guest gets a popup with the library's email. Staff see it greyed out. At most 5 a minute
Schedule Reservation	box on the record page	Patron	Only when a copy is available. Date and time pickers, then a Confirm popup, then "Thank You!". Refused with a red message: weekends, past dates, times outside 8:00 AM to 5:00 PM. Staff see it greyed out
Submit review	button on the record page	Patron	Opens the review page: 1 to 5 stars (required), remarks up to 1,000 characters. One review per patron per record. Staff see it greyed out
Quick review popup	after a download, or a minute of reading	Patron	Asks for stars and remarks; saving reloads the page with the review shown
Sign in	`/login`, or the popup on any page	Guest	Patrons land on `/home`, staff on the admin. 5 wrong passwords lock sign-in for a short time

Page	Address	Who	What to check
Register	`/register`	Guest	Name, email, contact number, password (8+ characters, typed twice). The email must not already be registered. At most 10 a minute
Forgot password	`/forgot-password`, then the emailed link `/reset-password/{token}`	Guest	Sends a reset link; the link sets a new password. At most 5 a minute
Verify email	`/verify-email`	Signed in	Resend the verification link (at most 6 a minute)
Satisfaction survey	`/csf/system-review`	Signed in	Seven ratings and three comments; a second try says it is already done
Sign out	menu item	Signed in	Ends the session; pages that need sign-in then ask for it
Sitemap and robots	`/sitemap.xml`, `/robots.txt`	Anyone	Lists published records only; `robots.txt` names the sitemap

3 OPAC: patron account

A signed-in patron reaches these from the **Welcome, {name}** menu at the top right; the red badges count unread replies and, on Transactions, what the library changed. A staff account sees **Return to admin** instead of this menu and is sent to `/home` if it opens these addresses.

Page	Address	Who	What to check
Profile	`/patron/profile`	Patron	Edit name, email (must be unused), contact number, birthdate (before today), affiliation, sex, patron type (required), region, address. Library code shown as a QR code
Change password	on the Profile page	Patron	Needs the current password; new password 8+ characters, typed twice. At most 10 tries a minute
Saved	**Saved** button in the search bar	Patron	Shows how many records are saved; opens `/results?saved=1`, the saved records with the usual filters. The star on a record adds or removes it
Transactions	`/patron/transactions`	Patron	Each reservation with its code, title, visit date and time, and status (For Approval, Approved, Open = checked out, Declined, Closed = returned). **Messages** opens a chat with the library about that reservation. When staff approve, decline, check out or check in one, the menu's Reservations badge counts it and the bell says so (approved: "ready for pickup"; others: "reservation updated") until the patron opens this page, where the card shows **Updated** once. The patron's own new request doesn't count

Page	Address	Who	What to check
Reservation chat	Messages button on a reservation	Patron	Send a message; the library's replies appear; opening it clears the badge. Only the patron's own reservations open. A blocked account cannot send
Inquiries	`/patron/inquiries`	Patron	Each inquiry with its record and messages; reply in the thread; "Seen" marks. Only the patron's own inquiries open. A blocked account cannot reply
To Review	`/patron/to-review`	Patron	Records the patron read or downloaded and has not reviewed yet; reviewing one removes it from the list

4 Admin: cataloguing

Every page here needs a staff account with `access.cataloging`, plus the permission shown. New records start **on hold** and appear in the OPAC only once published.

Page or action	Address	Who	What to check
Create New Record	`/admin/create-record`	`create.catalog`	MARC editor (choose a template, fill fields), or import one MARC file. Saving opens the new record's page; the record is on hold
Record List	`/admin/record-list`	`view.catalog.list`	Published records only. Search, filters (material type, author, year, full text, cover) with counts, sort, paging
Bulk actions	checkboxes on Record List and On-Hold	Publish/Hold: `publish-hold.catalog`; Delete: `delete.catalog`	Publish, hold, delete or re-index the ticked records; each asks for confirmation. At most 30 a minute
Bulk export	on Record List and On-Hold	`access.cataloging`	Ticked records as MARC21 (`.mrc`) or MARCXML (`.xml`); `/admin/export-records/{format}` exports all
On-Hold	`/admin/on-hold-list`	`view.catalog.list`	Held records only; same search, filters and bulk actions as Record List. The sidebar badge shows how many are held; publishing one lowers it at the next page load
Record page	`/admin/view-record/{id}`	`access.cataloging`	Details, citations (each with Copy), copies, reviews. An unknown number answers 404
Publish / Hold	buttons on the record page	`publish-hold.catalog`	The record appears in, or disappears from, the OPAC and its search
Edit	`/admin/edit-record/{id}`	`edit.catalog`	MARC editor with the record's fields; saving updates the OPAC. Fixing a problem the import flagged clears that flag
Delete	button on the record page	`delete.catalog`	Asks for confirmation; the record leaves the lists and the OPAC

Page or action	Address	Who	What to check
Cover photo	upload or remove on the record page	`edit.catalog`	JPG, PNG or WEBP up to 10 MB; other files refused with a message. Removing asks for confirmation. A generated title cover shows when there is no photo; it can be turned off per record
Full text (PDF)	upload or remove on the record page	`edit.catalog`	PDF up to 100 MB. **Read PDF** opens it in a new tab and **Download** saves it, through `/admin/full-text/{id}`; both work for held records too. Removing asks for confirmation
Copies	add, edit, delete on the record page	`edit.catalog`	Circulation number (unique), source, location, status. A copy marked Available makes the OPAC show the reservation box
Export MARC	`/admin/export-record/{id}/{format}`	`access.cataloging`	`mrc` or `xml`; the file opens in a MARC tool with the record's fields
Re-index for AI	button on the record page	`access.cataloging`	Queues the record for the AI search; it shows in the AI Sync Monitor
Import flag	banner on the record page	`edit.catalog`	Shows the problems the import found; **Mark reviewed** removes it
Batch Import	`/admin/create-batch`	`create.catalog.import`	Upload a MARC file (`.mrc`); the analysis shows record counts and material types; map types, then import (an "Importing please wait..." bar shows meanwhile); ends on the import report
Batch list	`/admin/batch-list`	`view.catalog.importlist`	Each import with file name, records, imported, skipped and "needs review" counts
Batch records	`/admin/batch-records/{id}`	`view.catalog.importlist`	The records of one import, with the same filters as Record List
Publish or hold a batch	on the batch list	`publish-hold.catalog`	All records of the import change at once
Delete a batch	on the batch list	`delete.catalog.import`	Asks for confirmation; removes the import's records
Local MARC tags	a record with 942, 952 or 999 (Koha exports have them), by Batch Import or **Import MARC file** in Create New Record	`create.catalog.import` / `create.catalog`	Local tags are named by their number: "942" on the admin Full Record tab and as the editor heading, subfields by code ("942$c"). Every one is kept (not only the first), the import does not fail, and **Update Record** keeps them. **Add Tag** (Create New Record, Edit, MARC Templates) offers 900–999, each with subfields $0–$9 and $a–$z. The OPAC hides 9XX tags
Import report	`/admin/batch-report/{id}`	`view.catalog.importlist`	Skipped records and imported-but-flagged records, each with its problems (no title, no author, possible duplicate...). **Download skipped records** gives a `.mrc` of the skipped ones
MARC Templates	Utilities card; `/admin/marc-templates`	`access.configuration` + `view.config.template`	List and search templates

Page or action	Address	Who	What to check
Create / edit template	`/admin/marc-templates/create`, `/admin/marc-templates/edit`	`create.config.template`, `edit.config.template`	Add MARC tags and subfields; the template appears in Create New Record
Delete template	on the template list	`delete.config.template`	Asks for confirmation
Material Types	`/admin/utilities/material-types`	`access.configuration` + `manage.material.types`	Add, rename, hide or show, merge into another type, delete. A type still in use cannot be deleted (the message says to merge it); MARC record types can only be hidden

5 Admin: circulation and inventory

Circulation pages need `access.circulation`; Physical Count needs `access.inventory`. A reservation moves For Approval → Approved → Open (checked out) → Closed (returned), or For Approval → Declined.

Page or action	Address	Who	What to check
Transactions	`/admin/reservations`	`circulation.reservation.view`	Every open reservation and loan (For Approval, Approved, checked out): title, requested by, email, status, code, date of visit; search and sort. Names and titles show as plain text, even when they contain symbols such as `<` or `>`. The sidebar badge counts open reservations (For Approval and Approved); the red one counts unread patron messages on the reservations listed here. A message on a declined or closed reservation doesn't light it: that conversation is under Inquiries
Material and patron details	click a title or a name in the list	`circulation.reservation.view`	Popups with the record's copies, and the patron's details
Approve	button on a For Approval row	`manage.circulation.reservation`	Pick an available copy first; the copy becomes Reserved and the status Approved
Decline	button on a For Approval row	`manage.circulation.reservation`	Asks for confirmation; status Declined
Check-out from a reservation	button on an Approved row	`manage.circulation.reservation`	Opens Check-Out with the reservation filled in
Revert	button on an Approved row	`manage.circulation.reservation`	Back to For Approval; the copy returns to Available
Reply	button on each row	`manage.circulation.reservation`	Chat with the patron about that reservation; the red badge counts unread patron messages. Greyed out for a blocked account

Page or action	Address	Who	What to check
Block or ban the patron	arrow beside Reply	`manage.patron.status`	Blocked: no chat or inquiries. Banned: no reading or downloading. The badge shows in the list
Check-Out/Check-In	`/admin/check-out-in`	`manage.circulation.checkouts`	Find a patron (library code) and a copy (circulation number)
Check-out	on Check-Out/Check-In	`manage.circulation.checkouts`	Due date and overdue fine rate; status Open; the copy is no longer Available
Edit a check-out	on Check-Out/Check-In	`manage.circulation.checkouts`	Change the due date or fine rate of an open loan
Check-in	on Check-Out/Check-In	`manage.circulation.checkouts`	Overdue hours and fine calculated; record amount paid and amount waived; status Closed; the copy is Available again
History	`/admin/borrowed`	`access.circulation.transaction`	Every reservation and loan, whatever its status, newest first: title, patron, transaction code, reservation code (or Walk-in), status, date; each opens its details
Physical Count	`/admin/inventory`	`access.inventory`	Enter or scan circulation numbers of copies on the shelf; the list pages and sorts through every copy; remove a wrong entry; **Reset** starts a new count (asks first)
Present and missing reports	`/admin/inventory/presented`, `/admin/inventory/reportpresented`, `/admin/inventory/reportmissing`	`access.inventory`	Copies counted, and copies on record but not counted; printable

6 Admin: people and roles

All of these open from **Accounts** under Administration in the sidebar. Patron pages need `access.accounts`; administrators, roles and permissions need the `super_admin` or `developer` role. Every staff account can edit its own profile.

Page or action	Address	Who	What to check
Accounts	`/admin/accounts`	`access.accounts`, or the `super_admin` or `developer` role	Cards for the account pages the role may use: Patrons (needs `access.accounts`); Administrators, Roles, Permissions (`super_admin` and `developer`, even if their `access.accounts` is unticked), each with a count. The sidebar's Accounts stays highlighted on those pages, and their breadcrumb leads back here

Page or action	Address	Who	What to check
Patrons	Accounts card; `/admin/patron`	`access.accounts`	Every patron: name, library code, contact, email, location, joined; filter by Active / Blocked / Banned; search. Names show as plain text
Generate Library Code	action on a patron	`edit.patron`	Gives the patron a new library code
Reset Password	action on a patron	`edit.patron`	Shows a new random password once; the patron can sign in with it
Block / Unblock	action on a patron	`manage.patron.status`	Blocked patrons cannot chat or send inquiries; a badge shows in lists
Ban / Unban	action on a patron	`manage.patron.status`	Banned patrons cannot read or download, even in a session already open
Delete patron	action on a patron	`delete.patron`	Asks for confirmation; the patron disappears from the list and cannot sign in
Register a Patron	button on Patrons; `/admin/register`	`create.patron`	Creates a patron with a library code. **Known issue:** the message says the password was emailed, but no email is sent; the patron has to use Forgot password
Administrators	Accounts card; `/superadmin/admin-list`	`super_admin` or `developer` role	Every staff account with its role
Create administrator	button on Administrators; `/superadmin/admin-create`	same	Name, email, role; the new account opens the admin
Change role	on Administrators	same	Only a developer can give the `developer` role. The last super admin cannot be changed to another role
Reset password, library code, delete	actions on Administrators	same	As for patrons; delete asks for confirmation
Roles	Accounts card; `/admin/roles`	same	Create, rename, delete roles; tick or untick each permission of a role. A staff member's menus change accordingly at their next page load
Permissions	Accounts card; `/admin/permissions`	`super_admin` or `developer`; add and delete: `developer` only	List and edit permission names
My profile	`/admin/profile`	Any staff	Edit own name and email (must be unused); change password with the current one (at most 10 tries a minute)

Page or action	Address	Who	What to check
Appearance	profile menu → **Appearance**; `/admin/appearance`	Any staff	Colour theme (9 ready-made, the ones marked AA keep text on them at 4.5:1 or more; or a custom colour, darkened until text on it reads), status colours (standard or colour-blind safe), text size 100–150% (the sidebar widens to fit), motion (follow the device, or always reduce), font (standard or Atkinson Hyperlegible). Each choice previews at once; **Save** keeps it on the account, on any computer; **Use the library default** goes back to Theme's. At 150% dropdowns still open under their buttons
Appearance: background, sidebar, contrast	same page	Any staff	**Background**: Standard, White, Warm cream, Cool grey; Dark, Dim, Black; **Follow my device** (light or dark with the computer's own setting, switching without a reload); or a custom colour, made light or dark enough for text on it to read at 7:1 (a note under Contrast says when it was adjusted). Panels, tables, menus, fields, badges and the dashboard charts follow it, and text stays readable on every admin page. **Sidebar**: dark, or light like the page (the logo then has dark lettering); always dark with a dark background. **High contrast**: pure white or black, text and links at 7:1 or more, underlined links, stronger borders and a thicker focus outline. With the standard choices every page looks exactly as before

7 Admin: dashboard, news, inquiries, reports, settings

The rest of the admin, in sidebar order. Staff land on the Dashboard after signing in (or on the first page their role allows).

Page or action	Address	Who	What to check
Dashboard	`/admin/dashboard`	`access.dashboard`	Library at a glance, Activity chart (choose a metric and a period; switch to a table), Top materials, Titles by material type, Patrons by category, Newest patrons, Recent reviews, Needs attention
Notification bell	top bar	`access.notifications`	Counts pending reservations, unread inquiries and reservation messages; each item opens its page, and the count drops once it is handled
OPAC button	top bar, `/admin/opac`	Any staff	Opens the OPAC signed in; **Return to admin** (`/admin/opac/return`) goes back to the admin page it came from

Page or action	Address	Who	What to check
Inquiries	`/admin/inquiry`	`access.inquiry`	Every inquiry, unread ones marked; open a thread, reply, see "Seen by"; block or ban the patron from there. Reservation conversations a patron wrote in (Messages on their Transactions page) are listed too, as "Reservation RSV-… · status" with the material's title: **Reply** shows the whole thread and answers in it (the patron reads it under Messages), and **Open in Transactions** finds an open one there. The sidebar badge counts the inquiries this account hasn't opened plus reservation conversations with unread patron messages
News Article	`/admin/news`	`access.news`	List, edit, delete (asks first)
Add or edit news	`/admin/news/add` , `/admin/news/edit/{id}`	`access.news`	Title, body (formatting kept, scripts removed), cover image (JPG, PNG or WEBP up to 2 MB), link (must start with http:// or https://), Featured. Shows under Related News on the OPAC home
Reports	`/admin/report`	`access.reports`	Pick a report and a period, preview, print: Acquisition, Patron, Borrowed Materials, Inquiries, CSF (satisfaction survey), Publication Downloads, Publication Uploads
Visitor log	`/admin/visits`	`access.reports`	Not in the menu; opens by address
Settings	`/admin/settings`	`access.configuration` + `access.settings`	AI mode on/off and its status check (`manage.ai.mode`); hide the site from search engines; Google verification code; generated covers on/off; **Save Settings**
Search index	card on Settings	same	**Scan** reports records missing from search; **Rebuild** re-creates the index (at most 5 a minute)
Sitemap	card on Settings	same	Regenerates `/sitemap.xml` (at most 5 a minute)
Clear cache	card on Settings	same	Home page shelves and counts refresh; patrons and staff stay signed in (at most 10 a minute)
Utilities	`/admin/utilities`	`access.configuration`	Cards for the tools the role may use: Material Types, MARC Templates, AI Sync Monitor, Theme. The sidebar's Utilities stays highlighted on those pages, and their breadcrumb leads back here. "No utilities for your role yet" otherwise
Theme	Utilities card; `/admin/utilities/theme`	`access.configuration` + `manage.theme`	The same choices as Appearance, as the library default for every staff member without their own; **Back to original** restores the template's look. Staff who chose their own keep it. With nothing chosen, every page looks exactly as before

Page or action	Address	Who	What to check
AI Sync Monitor	Utilities card; `/admin/ai-sync-monitor`	`access.configuration` + `access.ai.sync.monitor`	Pending, Failed and Synced counts; filter by change type and status; long titles wrap, and phones show each change as a card. **Re-sync** queues one record; **Run sync now** processes the queue (needs the AI service running)

8 Must not work: security checks

Repeat these every test round: each one should be refused. A "pass" here means the refusal happened. The automated test `tests/Feature/RouteSecurityTest.php` also checks every route on every push: sign-in, staff-only and per-permission refusals, the security token on every form, and no server error on any page, even for a missing record.

Try this	As	Expected
Open a PDF by its file address: `/pdf/{file}.pdf` or `/storage/pdf/{file}.pdf`	Anyone	404. Full texts open only through Read and Download
`/read/{id}`	Guest	The sign-in page
Read or download a record after it was put on hold	Patron	404, even from a page opened before the hold
`/admin/full-text/{id}`	Patron	403 Forbidden
Any `/admin/...` address	Guest	The sign-in page
Any `/admin/...` address	Patron	Sent back to the OPAC
An admin page outside the role, for example `/admin/settings` as `cataloging_admin`	Staff	403 Forbidden, and no menu item for it
`/patron/profile`, `/patron/inquiries`	Staff	Sent to `/home`
Another patron's reservation chat or inquiry (change the code or number in the address)	Patron	403 Forbidden
`/full-description/{id}` of a held, deleted or unknown record	Anyone	404
`/admin/view-record/999999` (no such record)	Staff	404, not an error page
`/csf/get-ratings/json` and `/marcfile/upload` (removed)	Anyone	404
`/opac/assets/contact.php`, or any `.php` address other than the site itself	Anyone	404 or 403, never a page
A folder address such as `/frontpages/` or `/thumb/`	Anyone	404 or 403, never a list of files
Register or edit a patron with a name like `<b>Test</b>` or `<img src=x onerror=alert(1)>`, then view it in reviews, the admin Transactions list, reservation chat, Patrons	Patron, then staff	The name shows exactly as typed, as text; no bold, no image, no popup
A news link starting with `javascript:`	Staff	Refused with a message
A cover upload that is not really an image (for example a text file renamed `.jpg`)	Staff	Refused with a message
Send 6 inquiries within a minute; then open several quick views and send one more inquiry the next minute	Patron	The 6th inquiry is refused ("Too Many Requests"); quick views never use up the inquiry allowance, so the later inquiry goes through. Each limit counts its own action
6 wrong passwords in a row	Guest	Sign-in locked for a short time with a message
Open any page and check its response headers (browser developer tools, Network tab)	Anyone	`X-Frame-Options: SAMEORIGIN`, `X-Content-Type-Options: nosniff`, `Referrer-Policy: strict-origin-when-cross-origin`
Show any eLibrary page inside a frame on another website	Anyone	The browser refuses to show it
